

# Dayliter & Dayliter Plus

The Atlite Dayliter is a 16mm triple glazed flat polycarbonate skylight. Designed for commercial projects but can also be used in a domestic application, the dayliter provides significant heat protection. With its thermal properties and characteristics, it's the most economical but effective way of lighting larger areas. The Dayliter Plus is with a clear outer dome to provide extra thermal protection and to provide water runoff on flat roof applications.

- Low profile
- Triple glazed
- Excellent fire hazard properties
- High-impact resistant
- Impact resistance of polycarbonate flat sheet is 250 times higher than float glass and 30 times that of acrylic materials
- Thermal insulation results in substantial energy savings in airconditioned and heated buildings
- For larger sizes or low pitched applications using a clear outer dome provides up to 90% light transmittance plus high impact resistance
- Best UV-stabilised polycarbonate for long-term weatherability
